## Tutorial 6 Vectors & Introduction to Matrices

During this workshop, students will work towards the following learning outcomes:

- calculate the cross product of two vectors, and use it to find areas and triple products.
- compute the sum, product, and transpose of matrices.
- identify properties of inverse matrices.

### Cross product and applications

1. If  $\mathbf{a} = 2\mathbf{i} - \mathbf{j}$  and  $\mathbf{b} = \mathbf{i} + 3\mathbf{j} - 2\mathbf{k}$  find  $\mathbf{a} \times \mathbf{b}$ , then verify that  $\mathbf{a} \times \mathbf{b}$  is orthogonal to  $\mathbf{b}$ .
2. Find the area of the triangle  $PQR$  determined by the points  $P(1, -1, 2)$ ,  $Q(2, 0, -1)$  and  $R(0, 2, 1)$ .
3. Find the area of the parallelogram formed by the two vectors  $\mathbf{u}$  and  $\mathbf{v}$ , if  $\|\mathbf{u}\| = 16$ ,  $\|\mathbf{v}\| = 4$  and the cosine of the angle between  $\mathbf{u}$  and  $\mathbf{v}$  is  $\frac{1}{2}$ .
4. Show that the vectors  $\mathbf{a} = [1, 2, -1]$ ,  $\mathbf{b} = [-2, 0, 3]$  and  $\mathbf{c} = [2, -4, -4]$  are coplanar.

### Matrix algebra

5. Given the following matrices

$$A = \begin{bmatrix} 2 & 0 & -1 \\ 4 & -5 & 2 \end{bmatrix} \quad B = \begin{bmatrix} 7 & -5 & 1 \\ 1 & -4 & -3 \end{bmatrix} \quad C = \begin{bmatrix} 1 & 2 \\ -2 & 1 \end{bmatrix}$$

compute each of the following operations if it is defined. If an expression is undefined, explain why.

- (i)  $A + B$
  - (ii)  $-4B$
  - (iii)  $AC$
  - (iv)  $CB$
  - (v)  $AB^T$
  - (vi)  $C - 3I_2$
  - (vii)  $C^2$
6. If a matrix  $A$  is  $6 \times 4$  and the product  $AB$  is  $6 \times 8$ , what is the order (dimensions) of  $B$ ?
  7. How many rows does  $B$  have if  $BC$  is a  $4 \times 3$  matrix?
  8. Let  $A = \begin{bmatrix} 2 & 5 \\ -3 & 1 \end{bmatrix}$  and  $B = \begin{bmatrix} 4 & -5 \\ 3 & k \end{bmatrix}$ . What value(s) of  $k$ , if any, will make  $AB = BA$ .

### Inverse matrices

9. Verify that  $A$  and  $B$  are the inverse of one another, if  $A = \begin{bmatrix} 2 & 5 \\ -3 & -7 \end{bmatrix}$  and  $B = \begin{bmatrix} -7 & -5 \\ 3 & 2 \end{bmatrix}$ .
10. Suppose that  $A$  and  $B$  are two square matrices such that  $AB = 0$ . Show that we must have  $B = 0$  if  $A$  is invertible.
